

## 719E Supplement

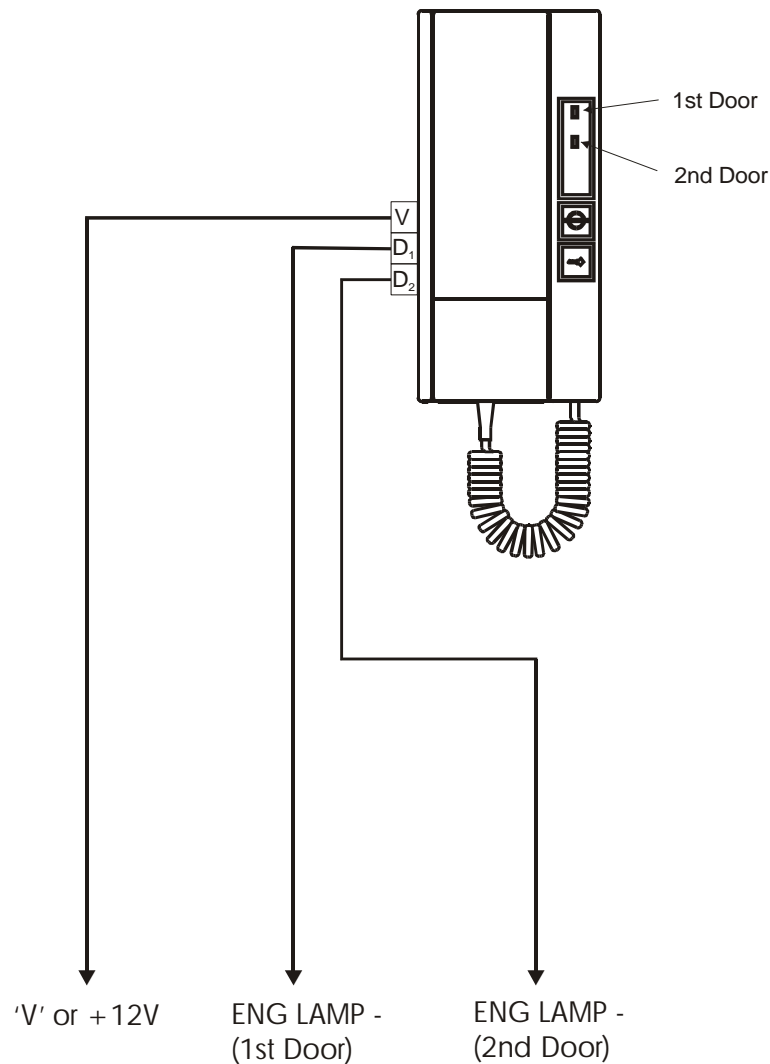

PD-062 Issue 1

### Application

The 719E is only required on systems with more than 2 entrances and 500H Series Phones. The 500H series phones can be used to indicator the calling status on any 2 entrances in the system.

### Description

The 719E has a software modification to allow the ENG LAMP outputs to be used with 500H series phones (with 2 calling door LED indicators). In all other respects the 719E is the same as a 719S 2 Door Switching Unit. When the speech circuit is active for a particular entrance the ENG LAMP output is active. Wiring to the 500H series phone is shown below.
